Mathematical and Numerical Modeling in Porous Media: Applications in Geosciences (Multiphysics Modeling)

Mathematical and Numerical Modeling in Porous Media: Applications in Geosciences (Multiphysics Modeling)

Porous media are broadly found in nature and their study is of high relevance in our present lives. In geosciences porous media research is fundamental in applications to aquifers, mineral mines, contaminant transport, soil remediation, waste storage, oil recovery and geothermal energy deposits. Despite their importance, there is as yet no complete understanding of the physical processes involved in fluid flow and transport. This fact can be attributed to the complexity of the phenomena which include multicomponent fluids, multiphase flow and rock-fluid interactions. Since its formulation in 1856, Darcy's law has been generalized to describe multi-phase compressible fluid flow through anisotropic and heterogeneous porous and fractured rocks. Due to the scarcity of information, a high degree of uncertainty on the porous medium properties is commonly present. Contributions to the knowledge of modeling flow and transport, as well as to the characterization of porous media at field scale are of great relevance. This book addresses several of these issues, treated with a variety of methodologies grouped into four parts:

- I Fundamental concepts
- II Flow and transport
- III Statistical and stochastic characterization
- IV Waves

The problems analyzed in this book cover diverse length scales that range from small rock samples to field-size porous formations. They belong to the most active areas of research in porous media with applications in geosciences developed by diverse authors.

This book was written for a broad audience with a prior and basic knowledge of porous media. The book is addressed to a wide readership, and it will be useful not only as an authoritative textbook for undergraduate and graduate students but also as a reference source for professionals including geoscientists, hydrogeologists, geophysicists, engineers, applied mathematicians and others working on porous media.

From reader reviews:

Jeffrey Smith:

Now a day people who Living in the era everywhere everything reachable by match the internet and the resources within it can be true or not involve people to be aware of each info they get. How individuals to be smart in getting any information nowadays? Of course the answer is reading a book. Looking at a book can help folks out of this uncertainty Information specially this Mathematical and Numerical Modeling in Porous Media: Applications in Geosciences (Multiphysics Modeling) book since this book offers you rich data and knowledge. Of course the information in this book hundred pct guarantees there is no doubt in it as you know.

Joseph Vargas:

This Mathematical and Numerical Modeling in Porous Media: Applications in Geosciences (Multiphysics Modeling) tend to be reliable for you who want to be considered a successful person, why. The reason why of this Mathematical and Numerical Modeling in Porous Media: Applications in Geosciences (Multiphysics Modeling) can be one of the great books you must have is definitely giving you more than just simple reading through food but feed a person with information that might be will shock your prior knowledge. This book is usually handy, you can bring it everywhere you go and whenever your conditions at e-book and printed versions. Beside that this Mathematical and Numerical Modeling in Porous Media: Applications in Geosciences (Multiphysics Modeling) forcing you to have an enormous of experience such as rich vocabulary, giving you trial run of critical thinking that we all know it useful in your day pastime. So , let's have it and revel in reading.

Gloria Lentz:

The book Mathematical and Numerical Modeling in Porous Media: Applications in Geosciences (Multiphysics Modeling) has a lot of information on it. So when you make sure to read this book you can get a lot of benefit. The book was authored by the very famous author. The writer makes some research previous to write this book. This kind of book very easy to read you can find the point easily after scanning this book.

Connie Nixon:

People live in this new moment of lifestyle always try and and must have the extra time or they will get lot of stress from both day to day life and work. So , if we ask do people have time, we will say absolutely of course. People is human not really a robot. Then we inquire again, what kind of activity are you experiencing when the spare time coming to a person of course your answer will probably unlimited right. Then ever try this one, reading ebooks. It can be your alternative inside spending your spare time, typically the book you have read is usually Mathematical and Numerical Modeling in Porous Media: Applications in Geosciences (Multiphysics Modeling).
