Herbert R. Stollorz

A Donut Atom Nuclear Story: How the Universe was Created Herbert R. Stollorz

Herbert R. Stollorz describes his new donut model for an atom's nucleus, which functions as the structural source of gravity and magnetism. He also postulates how life is embedded within each atom. It presents a hi-tech inventor's perspective on the mysteries of gravity embedded with life. Its Bible-based insights explain why secular theories popular with the scientific community violate entropy laws. The author weaves concepts drawn from historic antiquity linked to modern science into a proposed unified fabric of established science principles scalable from the atomic to the galactic level. His five other Babushka concept books describe a historic-prophetic biblical timeline from antiquity into the future that is also validated in this book. Examples are: what does the 2,100-year old Antikythera bronze clock measure? Or why has the IPK platinum Standard Kilogram gained weight? Why are the real causes of global warming never explained in the halls of education?
